

Introduction to Kubernetes

Kubernetes is a powerful system developed by Google for managing containerized applications managing related, distributed components across varied infrastructures.

Course Topics

1. Containers & Microservices Recap
 - What's missing in Dockers containers?

2. HL Kubernetes as orchestration solution
 - Kubernetes vs. Marathon / Mesos / Swarm

3. Pods (vs. containers)
 - Master/node
 - Services
 - Kubectl

4. Clusters
 - Minikube

5. Application lifecycle
 - Deploy
 - Staging
 - Update (Upgrade/Rollback)
 - Monitoring and health check
 - Scheduling

6. Stateless/Stateful Application

7. (auto) Scaling
 - Scale up/down
 - Load balancing

8. Secrets

9. Networking
 - IP/ports
 - Discovering

10. High availability in Kubernetes

11. Kubernetes hands-on
 - Create containers
 - Create pods
 - Create clusters
 - Deploy applications
 - Scale up applications

Duration: 1 Day(s)

Target Population : People with basic knowledge of Containers who want to learn K8S.

Before taking this course, the participants should have a basic knowledge of Containers.
